

Single channel extra electric load for rear direction indicator light

Connection diagram:

IN white wire – ground
black wire – signal “+” from vehicle installation

Connection diagram:

OUT white wire – ground
black wire – signal “+” into the lamp

General regulations

1. Single channel extra electric load, made by “WAŚ” corporation have to be assembled on well take back warm surface on minimum 400 cm² area.
2. Have to be assembled far away from fuel canal.
3. Device attend only to rear direction indicator light.
4. In case of overmuch increase temperature inside, will occur switch of device from vehicle installation. After decrease of temperature, electronic system starts working again.
5. In case of destruction LED direction indicator light, will occur switch off device.
6. Double electric load recognize by itself connected voltage. Switching voltage levels appears by about 18V.

Parameters:

Voltage:	12/24V
Power consumption:	26W
Thermal protection:	120°C
